5: Blom & LaFarge A,E-4,5 (1925) 1927 NV9 Tzeltal NV9

tied by a string carried down to an arched stick, H, stuck in the ground. This string, by holding down the far ends, counterbalances the weight of the fall at the other ends. At the end of the string the cross-stick, D, holds it against the arch; it, in turn, is held by the trigger, C, one end of which braces against it, the other end against the far side of the trap, passing under the deadfall. A circular fence of sticks prevents an animal from getting at the outer part of the trap. A straight fence on the other side of the fall necessitates its entering through the entrance, AA, to get at the bait, B, on the trigger. The animal dislodges the trigger, releasing D and with it the string. The outer ends of the sticks fly up, and the weighted log falls. In the rat trap, the log and stones came to at least three kilograms, arranged to fall through a space of about ten centimeters, other traps being in proportion.

When hunting with a gun, a red fruit called *ahoon* is frequently rubbed on the shot, and *palma bendita, tcul-těc-wil can,* the palm used in church decorations, is used for the wad. This prevents the bullet "from getting tired" before it reaches its mark.

Meat obtained while hunting, if it cannot be carried immediately to the house, is dried on a rack, *tcax.*

The primary method of carrying goods of all kinds is by the tump-line, for which, as has been said in the discussion of physical and other characteristics, these people are very well adapted. The tump-line, *pak,* is a broad strip of inner bark, or of cow-hide. For their ordinary uses, this is a single strip, the ends being attached to a net (q. v.) of their own manufacture. When a package too bulky for the net is carried, a long strap is used with the ends tied together. This is looped through itself, around the package, so that it hangs in two slings. Additional straps may be attached to the line where it passes over the ears, to wrap around the sides of the burden. A flat piece of cowhide, *tcokHax,* is worn against the back, to protect the carrier from the chafing of his load. Both men and women use the tump-line, the carrying of objects on the head being unusual.

Formerly the Indians of this district are said to have owned a good many mules and horses for packing, which they lost during the recent political disturbances. Many of them know something about packing. At present, however, few if any own cattle of any kind.

The highland rivers do not, on the whole, lend themselves to water travel, although the Bachajon territory reaches to the Bascan, Tulija, and other more amenable water-ways. Canoes are known only as introductions of German or Ladino ranchers. The natives use a

raft, *poi*, to cross rivers or make very short trips. The specimen observed at *Hol-ha'* (Head of the Water), was made of five cork logs averaging 22 centimeters in diameter and 3.25 meters long, held together by two cross-sticks lashed on with lianas. There was some space between each log, the width of the raft being 1.25 meters. It had a definite bow and stern, the logs at the forward end being cut to an edge, "to cut the water." These rafts are propelled by a pole, preferably of mahogany, the one observed being 2.50 meters long. They are moored by thrusting the pole through a crack between two of the logs, into the bottom of the stream.

As one would expect, the old, complicated organization of priests and rulers, the aristocracy of pre-Conquest days, has been utterly swept away. Today, in their social organization, one may trace a little of the feeling of the old times, but the system is the creature of Spanish contact. On the haciendas there are no native officials save those who preside over the fiestas. The owner of the hacienda maintains a patriarchal sway over his workmen, governing them in every respect. Among the village tribes at Bachajon and Sivacá life is still influenced by the obligation to work for the government or the ranchers, although the independent nature of the Indians has won for them a good deal of self-government. Those of the Bachajon living on land belonging to ranches find themselves under a dual system, although the scattered location of their dwellings, deep in the jungles, minimizes the power of the Ladinos.

The tribes are very different from those of North America. From our brief observation, it appears as though there was none of that deep feeling of loyalty towards the group, of essential, almost mystic unity with the other members that characterizes our own Indians. Similar customs, common interest, and geographical proximity hold each Tzeltal group together; bonds that are easily broken. Should an outsider attack the common weal by seizure of land or by any other infringements, he will find the tribe solidly united against him, but at the same time it may be, and often is divided within itself by many quarrels. The Bachajon carry out long feuds between families and individuals in the form of occasional murders. These have their origin in delayed retribution for some wrong received by one party from the other, for which, in turn, there is retaliation, and so on indefinitely.

For instance, the murder committed while we were at Encanto was the climax of a long-nursed grudge, and almost immediately afterwards there were indications that from that fight would arise many others. Occasional attacks on ranchers are also usually carried
